---

Dear WindPRO User,

Referring to our notification on June 8, 2011 regarding on-line data access via version 2.6.

According to our licensing system, you are currently using the former WindPRO version 2.6.

We regret to inform you that it will not be possible for users of version 2.6 to download free on-line data (maps, height contours, roughness data and long-term wind reference data) directly through the interface in WindPRO as only the interface in the current version 2.7 will be serviced in the future. This change will be effective from today's date.

In order to continue being able to download free on-line data directly through the interface in WindPRO, users of version 2.6 will need to update their license to the current version 2.7.

Kindly observe that the above change only relates to the interface. This means that you can still use version 2.6 after the above-mentioned date, but without the interface to import free on-line data directly from the EMD server.

If you would like to know the price for updating your present WindPRO version 2.6 license to version 2.7, please just contact our sales department at [sales@emd.dk](mailto:sales@emd.dk), and they will subsequently send you a quotation by e-mail.

With best regards,

WindPRO Support Team
